ADMINISTRATIVE CENTER AND LOCAL POLICE OFFICE

The two buildings are organized around a central square next to the existing cultural center. Modular open-plan offices on concrete floor slabs, without beams or false ceilings, maximize flexibility and allow free positioning of partition walls. All technical equipment is recessed in access floors. The same type of construction will be used for the library. Pluvial water from the roof is stored in concrete tanks in the basement, from where it is recycled for toilet flushing, fire-fighting water, and as a source of cooling in the summer.
